

EXPERIMENT21: Zero-shot, One-shot, and Few-shot Prompt for a Smart Fitness Watch.

Program 1

Zero-shot, One-shot and Few-shot Prompt Example

```
choice = int(input("Enter Prompt Type (1-Zero Shot, 2-One Shot, 3-Few Shot): "))
```

```
if choice == 1:
```

```
    print("\n----- Zero-Shot Prompt -----")
```

```
    print("Write a product description for a Smart Fitness Watch.")
```

```
    print("\nGenerated Output:")
```

```
    print("The Smart Fitness Watch helps you stay healthy by tracking your heart rate, steps, sleep, and calories burned. It features GPS, a waterproof design, and long battery life, making it perfect for fitness enthusiasts and daily use.")
```

```
elif choice == 2:
```

```
    print("\n----- One-Shot Prompt -----")
```

```
    print("Example:")
```

```
    print("Product: Wireless Earbuds")
```

```
    print("Description: Enjoy crystal-clear sound with long battery life and a comfortable design.")
```

```
    print("\nNow generate a description for a Smart Fitness Watch.")
```

```
    print("\nGenerated Output:")
```

```
    print("Stay fit and connected with the Smart Fitness Watch. It offers heart rate monitoring, sleep tracking, GPS, and activity tracking. Its stylish design and long battery life make it an excellent companion for everyday fitness.")
```

```
elif choice == 3:
```

```
    print("\n----- Few-Shot Prompt -----")
```

```
    print("Example 1:")
```

```

print("Product: Wireless Mouse")

print("Description: Smooth navigation with ergonomic comfort.")

print()

print("Example 2:")

print("Product: Smart Speaker")

print("Description: High-quality sound with voice assistant support.")

print()

print("Now generate a description for a Smart Fitness Watch.")

print("\nGenerated Output:")

print("The Smart Fitness Watch is designed to monitor your health and fitness. It
includes heart rate monitoring, sleep analysis, GPS, step counting, and waterproof
protection. Its modern design and long-lasting battery make it ideal for an active
lifestyle.")

else:

    print("Invalid Choice!")

```

output

```

Enter Prompt Type (1-Zero Shot, 2-One Shot, 3-Few Shot): 1

----- Zero-Shot Prompt -----
Write a product description for a Smart Fitness Watch.

Generated Output:
The Smart Fitness Watch helps you stay healthy by tracking your heart rate, step
s, sleep, and calories burned. It features GPS, a waterproof design, and long ba
ttery life, making it perfect for fitness enthusiasts and daily use.

```

Prompt: Future Technology

[transformers] Both 'max_new_tokens' (=256) and 'max_length' (=40) seem to have been set. 'max_new_tokens' will take precedence. Please refer to the documentation for more information.
(https://huggingface.co/docs/transformers/main/en/main_classes/text_generation)

Future Technology has been working on these for quite some time. It has been one of the most exciting projects in the history of robotics.

What is a robot?

A robot is a robotic device that is able to walk, talk, dance, and perform certain tasks. Its main role is to perform tasks like lifting, bending, picking up objects, and doing other tasks.

The name robot comes from the Latin verb robotus, meaning "to walk."

What happens when the robot is out of the way?

The robot will not be stationary, and will not walk. Instead, it will continue to perform certain tasks, such as performing a task for one second, bending a chair, or picking up objects in the air (such as a bicycle).

What are the differences between robots and humans?

Robots are more like humans, because they move and act on their own volition. They tend to move in a direction that is unique to each individual.

Robots can be used for many different tasks. A robot can be used for a task that involves moving a chair, carrying a suitcase, or even picking up a child. A robot can be used for a task that involves picking up or removing objects or objects

Prompt: Python Programming

[transformers] Both 'max_new_tokens' (=256) and 'max_length' (=40) seem to have been set. 'max_new_tokens' will take precedence. Please refer to the documentation for more information.

Python Programming Language

The Python Programming Language is the Python programming language that is used for the programming of computer graphics. The language has been developed by the University of Michigan, the University of California, Santa Barbara, the University of California, San Diego, the University of California at Berkeley, the University of California, Berkeley, the University of California at Santa Cruz, the University of California, Berkeley, and the University of California, Santa Cruz.

The language was originally developed as a programming language for the University of Michigan and the University of California at Santa Barbara. In this way, the language is known as the "python programming language."

The language was written in C.

The language has been ported to Python 2.7.2.

The Python 2.7.2 release was released on June 18, 2013, and the Python 2.7.2 release was released on June 24, 2013.

The Python 3.6.2 release was released on May 5, 2014 and the Python 3.6.2 release was released on May 17, 2014.

The Python 3.6.2 release was released on June 30, 2014.

The Python 3.6.2 was released on June 30, 2014.
