

EXPERIMENT-13. Generate Text using GPT-2

```
from transformers import pipeline
```

```
generator = pipeline("text-generation", model="gpt2")
```

```
text = generator(  
    "Today is a beautiful day",  
    max_length=40  
)
```

```
print(text[0]["generated_text"])
```

output

```
-----, -----, -----,  
[transformers] Ignoring clean_up_tokenization_spaces=True for BPE tokenizer GPT2  
Tokenizer. The clean_up_tokenization post-processing step is designed for WordPi  
ece tokenizers and is destructive for BPE (it strips spaces before punctuation).  
Set clean_up_tokenization_spaces=False to suppress this warning, or set clean_u  
p_tokenization_spaces_for_bpe_even_though_it_will_corrupt_output=True to force c  
leanup anyway.  
Today is a beautiful day for all of us in the world. I wish as many of you do, t  
hat you could be more fortunate than ever to have your day in the sun. Because I  
know that our beautiful day is coming.  
  
Thank you for your many prayers, for your many good wishes, for your many blessi  
ngs, and for all of your blessings that are coming to you today.
